

ATC® REAL TIME C.G.I. VISUAL SYSTEM

Introducing ATC's new real time C.G.I. visual display system for use on any ATC 800 or 900 series Flight Simulators. This new display incorporates an infinity optical system which provides a realistic out-of-the-window effect. A co-pilot display is available for those customers who require crew coordination training. Updating at 30 Hertz ATC's visual system eliminates the annoying lag associated with other so called low cost systems.

ATC's new visual system is field retrofittable to all ATC 800 and 900 series Flight Simulators. For all the exciting details please contact ATC Flight Simulator Co., 1650 19TH Street, Santa Monica, CA 90404.
